Summary

Product-focused Computer Science undergraduate with a track record of building and scaling digital platforms. Co-founded a media platform scaling to 350,000+ visitors and architected multiple production-grade web applications. Expert in leveraging modern dev-tools (AI, SSG, No-Code) to accelerate development lifecycles. Specialized in Frontend Architecture, Technical SEO, and Product Strategy.

Education

Bachelor of Technology in Computer Science and Engineering

Oct 2022 – Jun 2026

Viswajyothi College of Engineering and Technology

CGPA: 8.21

Higher Secondary (Computer Science)

Jul 2020 – Jun 2022

St. Sebastian's HSS

Percentage: 91.16%

Skills

Languages & Core: Python, JavaScript (ES6+), SQL (Basics), HTML5, CSS3

Frameworks & Tools: Flask, Supabase, Netlify, Cloudflare Pages, Git/GitHub, VS Code

Product Strategy: Technical SEO, System Architecture, Web Performance, Prompt Engineering

Experience

Freelance Web Engineer

Nov 2025 – Dec 2025

Vadakkanady Builders

- Architected a custom Static Site Generation (SSG) workflow to solve the client's need for a high-performance, SEO-driven corporate presence.
- Developed an automated Node.js asset pipeline to handle image optimization and minification, ensuring sub-second load times.
- Deployed a serverless Jamstack solution on Cloudflare Pages, strictly meeting the client's zero-cost hosting constraint.

Co-Founder & Content Head

Aug 2021 – Sep 2023

Halfway Football (Remote)

- Built and led a football media platform, scaled to 350,000+ visitors over two years with strong social media engagement.
- Managed a volunteer team and published exclusive reports to build platform credibility and community engagement.

Projects

VisionMate

GitHub

Wearable assistive system integrating Smart Glasses with a Native Android companion app.

- Architected a privacy-first solution using Google ML Kit for on-device, offline Object Detection and OCR.
- Designed a voice-guided navigation module utilizing Mapbox SDK and a custom Gesture Fallback interface.
- Engineered a low-latency data pipeline to stream video from hardware to mobile via Local Wi-Fi.

Anson's Drive

Live Demo

Metadata-Driven document management system using Vanilla JS and JSON.

- Engineered a component-based architecture in Vanilla JavaScript, replicating modern framework principles (State Management, Virtual DOM logic) to optimize performance without heavy dependencies.
- Implemented asynchronous data layers for real-time search and filtering, ensuring instantaneous UI feedback.

FaceCertify

GitHub

Realtime exam verification system using Python, Flask, and OpenCV.

- Trained a Support Vector Machine (SVM) model to perform real-time, high-confidence identity verification.
- Automated attendance logging to CSV and built a secure admin dashboard for student management.
